**Author:** Tinbergen, B.E.

**Title:** The 'cello' in the Low Countries : the instrument and its practical use in the 17th and 18th centuries

**Issue Date:** 2018-06-13

*Musijcke*

Musijck is als een toovery,  
Die goed is voor melancoly.  
*Musijck is goed, Voor 't swarte bloed.*  
Diens oor vervremt is van Musijck,  
Is meer een beest, als mensch ghelijck.  
*Een zoet musijck, Voeght by gheen lijck.*  
Musijck is goede medecijn,  
Voor lien, die droef van gheeste zijn.  
*Musijck is d'ooghe van de oor.*  
Musijck verwijft een mans ghemoet,  
En zacht' en zoete zinnen voedt.

(From: Brune (1636), pp. 450-451)

## Summary

As a baroque cellist I am naturally interested in what instruments looked like in the Baroque, how they were played, what kind of music was composed for cello (solo) and in what way this music should be performed. As a Dutch baroque cellist I am above all most interested in the situation in the Low Countries from around 1600 up to 1800.

I have studied many reference books on the cello, and regardless of the language they have been written in, they hardly provide any information on the history of the cello in the Low Countries. The historiography about the cello has been mainly focussed on Italy and to a lesser extent on other European countries like France and Germany.

It was, however, rather remarkable that these reference books extensively use reproductions of paintings and other representations of cellos, mainly from the Noordelijke Nederlanden. Since so many works of art were produced in the Low Countries, it cannot be that the cello was not used there during the period these images were produced.

These reference books not giving the answers I was looking for prompted me to conduct this doctorate research, which deals with the following question:

*What was the name, the appearance, the development and the playing technique of the cello in the Low Countries between 1600 and 1800 and what music was composed for it?*

This question has been divided into four sub-questions, each of which are dealt with in one chapter of this dissertation.

In Chapter 1 I have investigated whether in written sources information is to be found about the name of the cello, and possible additional information about the tuning of the strings and the technique.

Chapter 2 is based on a research corpus of over 850 17<sup>th</sup> and 18<sup>th</sup>-century representations of cellos and cellists (reproduced in Parts 2a and 2b of this dissertation). The following characteristics of the cello were scrutinized: size, scroll, shoulders, sound holes, frets, material and number of strings and the colour of the hairs of the bow, as well as how the instrument was played (how is the instrument held, the way the bow is held and the position of the left hand). The database with all results is reproduced in Part 3.

A case study about French instruction drawings meant for a cello method has also been added. The depicted technique here has been compared with that on Dutch images to determine how realistic the Dutch images are.

Chapter 3 focuses on the instruments still present in museums and private collections. An important question was whether the characteristics of these instruments are to be found on the images presented in Chapter 2.

Chapter 4 is divided into two Sub-chapters, about the music from the 17<sup>th</sup> and music from the 18<sup>th</sup> century respectively. By including the results from Chapter 1, I examined whether the name of the instrument, as mentioned in the 17<sup>th</sup>-century music, can shed light on which instrument should be used to play the bass line.

As for the 18<sup>th</sup>-century music: of the majority of the books containing sonatas for cello solo and basso continuo or for two cellos only a short description has been given. The composer Alexis Magito, however, has been researched more thoroughly, since until now hardly anything was known about him. The results of this research have been presented as an extensive case study.

The name 'cello' is a common term used mistakenly for the entire period of my dissertation. Therefore the word cello was placed between inverted commas in the title. The most correct term would be: *8' bass instrument of the violin family*. Since this description is too long to use each time, I have chosen, when speaking generally, to name the 17<sup>th</sup>-century instrument '*bass violin*' and the 18th-century instrument '*cello*'.

In general the conclusion may be drawn that during the period studied the cello was used far more in the Low Countries than 20<sup>th</sup>-century literature wants us to believe. Instruments were built, very many images were produced and also a sizable collection of music for cello was composed (cello as continuo instrument (possibly obligato) or as solo instrument).

The most surprising outcome has been that, in comparison to what was previously thought, the underhand bowing was used extensively. Moreover I found a lot of information about the composer, cellist and engraver Alexis Magito and I could date his sonatas more precisely than had been possible until now.

It is very important that (baroque) cellists examine the results of this research. It shows that also in the Low Countries the cello was widely used, that the instrument had many different characteristics and that it was played in many different ways.
